54 **Ceramic cased capacitor.**

57 The capacitor comprises at least two conductive plates (12, 14) encased at a selected gap within a substantially monolithic casing (24) of selected dielectric material such as a ceramic material. The plates (12, 14) each include a tab (28, 30) projecting beyond an adjacent margin of the adjoining plates. Recessed seats (20, 22) are formed in the casing as

by drilling to bridge at least partially into the tabs (28, 30). Conductive lead ends (16, 18) are attached to the capacitor by soldering within the recessed seats, thereto securely anchoring the leads in a manner substantially impervious to moisture penetration.
